Adaptive Management and Learning in Commodity Supply Chains

A time for urgent collaboration and coordination

In recent years, as rates of commodity driven deforestation reached all-time highs, the world witnessed an emergence of initiatives aimed at tackling the urgent issue. In reality however, the challenge is far too large for one actor or effort to overcome alone.

The 'Good Growth' solution

The Good Growth Partnership promotes an integrated approach to achieving sustainability in commodity supply chains by engaging a full range of stakeholders, from small-scale producers to national governments and global companies.

In addition to coordinating the integrated portfolio of the Partnership's activities, the Adaptive Management and Learning Project also works to improve the flow of insights and lessons learned throughout major commodity supply chains.

Budget

GEF: USD \$3,978,441

Co-financing: USD \$5,266,887

Implementing agencies

UNDP and WWF in partnership with ISEAL Alliance

Countries and regions in scope

Global with a focus on partner countries:

Brazil, Indonesia, Liberia and Paraguay

Project components

Management, monitoring and communication

Responsible for the overall management of the integrated Good Growth Partnership portfolio, the Adaptive Management and Learning Project supports effective coordination, communication and knowledge sharing between partner agencies, countries and the wider community of commodity supply chain practitioners.

Gender & resilience

The Adaptive Management and Learning Project ensures that the empowerment of women and resilience to climate change are considered and mainstreamed throughout the Partnership's activities and projects. This includes prioritizing the participation of marginalized, disempowered and discriminated groups in decisions that affect their livelihoods and overall sustainable development.

Green Commodities Community

Through a facilitated learning exchange, seminars, guidance materials, one-to-one support and other tools, the Partnership supports the Green Commodities Community to openly share stories, successes, failures, ideas, challenges and solutions among a growing global community of commodity practitioners.

Good Growth Conference

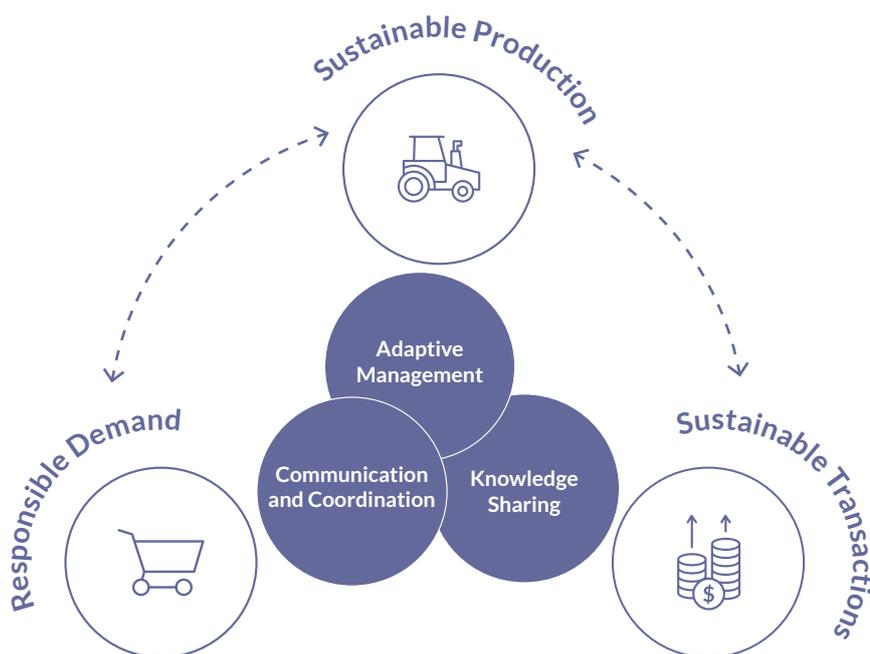

The Good Growth Conference is an immersive learning experience designed to connect practitioners who are committed to reducing deforestation, empowering producers and creating systemic sustainable change in agricultural commodity sectors.

Global Impacts Platform

The Good Growth Partnership is supporting the establishment of the Global Impacts Platform, an initiative that is led by ISEAL Alliance. This online repository of information consolidates research and helps to inform decision-making by synthesizing and communicating available data on sustainable production as well as voluntary sourcing standards and commitments.

The Good Growth Partnership's integrated knowledge sharing strategy

Insight

“The Good Growth Partnership provides a platform from which we can draw lessons and tap into best practice on key sustainability issues which are often faced by other countries. I’m sure that Liberia will learn greatly from the comparative experiences of other countries as we embark on the journey toward sustainable palm oil.”

Cleophas Torori
UNDP-Liberia Deputy Country Director

Expected results

60%

of Green Commodities Community participants change their programs, practices and/or policies based on learning and knowledge shared by the Partnership.

4

gender analyses completed in the Partnership’s focal landscapes and countries to better understand how women can be empowered in the production of sustainable commodities.

5

published knowledge products, which share Good Growth Partnership insights and learnings, including one feature publication assessing the impacts of demand and transactions on sustainable production.

2

international Good Growth Conferences which convene practitioners and high-level changemakers from major commodity supply chains.

5,000

annual users engaged with the Global Impacts Platform, which will host a minimum of 150 research documents that provide evidence on the effectiveness of deforestation free commitments and sustainability standards.

About the Good Growth Partnership

Working across production, financing and demand, the Good Growth Partnership convenes a wide range of stakeholders and initiatives to reduce deforestation in three global commodity supply chains: soy, beef and palm oil.

Launched at the United Nations New York headquarters in 2017, the Partnership is funded by the Global Environment Facility and led by the United Nations Development Programme in partnership with Conservation International,

the International Finance Corporation, UN Environment and World Wildlife Fund.

In collaboration with the governments of Brazil, Indonesia, Liberia and Paraguay, as well as civil society and major private sector players, the Good Growth Partnership aims to place sustainability at the heart of commodity supply chains.
